Jiya Jaiswal

jaiswaljiya001@gmail.com | Delhi, India | +91 87001 87122 | *LinkedIn↗* | *GitHub↗*

Education

Kalinga Institute of Industrial Technology (KIIT) — Bhubaneswar, India
B.Tech in Computer Science Engineering, CGPA: 9.26/10 — *Aug 2024 – Oct 2028*

- *Coursework:* DSA, OOPs (Java), OS, COA, DBMS

Delhi Public School, Ruby Park — Kolkata, India
AISSCE (Class XII, Science), Percentage: 95% — *Aug 2022 – Jun 2024*

The BSS School — Kolkata, India
WBBSE (Class X), Percentage: 89% — *Jan 2009 – Jun 2022*

Projects

- **MazeMind – Adaptive AI Maze Game | *GitHub↗*** — *May 2026 – Jun 2026*
  C#, Unity, ScriptableObjects, URP, Git
  - Architected an **AI Director** that tracks deaths, time-in-section, and hazard hits, firing priority-sorted `AdaptationRuleSO` ScriptableObjects to retune hazard density, gem placement, and key spawns – with `AdaptationState` as the shared event bus decoupling the Director from per-room logic.
  - Built a **procedural CheckboxFloorGenerator** producing connected solvable mazes, and an in-game `DecisionLogger` capturing every adaptation event for replay and rule tuning; delivered **Room 1 end-to-end** (3 sections, spawn points, section triggers, win/lose flow) integrating teammate-authored enemy mechanics.
  - Validated AI Director rule firing across all difficulty transitions through 20+ playthroughs; the full game shipped with **3 playable rooms** featuring escalating mechanics – bullet traps, sliding platforms, forced-fall sequences, and NPC enemies.
- **FactLens – Agentic Misinformation Detector | *GitHub↗*** — *MumbaiHacks 2025*
  Python, FastAPI, Groq LLaMA 3.1, Knowledge Graphs, Docker, GitHub Actions
  - Built a **multi-agent claim verification pipeline** labeling social posts True/False/Partly True at up to **96% confidence**, by chaining two Groq LLaMA 3.1 agents – one for claim extraction, one for evidence-grounded verdict reasoning.
  - Eliminated out-of-evidence hallucinations across all tested scenarios by constraining LLM verdict reasoning to a **structured knowledge graph** (`kg.json`) via explicit prompt-level context blocking – equivalent to a strict RAG architecture, validated on a synthetic crisis-scenario dataset.
  - Architected the pipeline for **precision/recall/F1 evaluation** across True/False/Partly-True verdict classes; reduced deployment to a single command via **Docker + GitHub Actions CI/CD** with a clean `backend/ extension/ assets/` split for parallel team development.
- **OmniDict – Distributed Sharded KV Store | *GitHub↗*** — *Jun 2025 – Aug 2025*
  Go, gRPC, Protocol Buffers, HashiCorp Raft, Consistent Hashing, Docker
  - Built a **multi-agent claim verification pipeline** labeling social posts True/False/Partly True at up to **96% confidence**, by chaining two Groq LLaMA 3.1 agents – one for claim extraction, one for evidence-grounded verdict reasoning.
  - Eliminated out-of-evidence hallucinations across all tested scenarios by constraining LLM verdict reasoning to a **structured knowledge graph** (`kg.json`) via explicit prompt-level context blocking – equivalent to a strict RAG architecture, validated on a synthetic crisis-scenario dataset.
  - Architected the pipeline for **precision/recall/F1 evaluation** across True/False/Partly-True verdict classes; reduced deployment to a single command via **Docker + GitHub Actions CI/CD** with a clean `backend/ extension/ assets/` split for parallel team development.

Skills

Languages: Go, Python, C#, Java, JavaScript, SQL
Frameworks: FastAPI, gRPC, Protobuf, HashiCorp Raft, LLM APIs (Groq), Multi-Agent Pipelines, RAG, Knowledge Graphs
Tools: Git, Docker, GitHub Actions (CI/CD), Linux, Unit Testing
Platforms: MySQL, Oracle SQL, Unity

Achievements

- **Top 500 / 3,000+ teams** at MumbaiHacks 2025, Multi-Agent AI track
- **Top 50**, Silicon Labs IoT Challenge 2026 – Smart Healthcare with Edge AI track
- **Top 30 Finalist** at Tech Zephyr 2025, IIT Bhubaneswar
- Secured **AIR 646** in KIITEE Entrance Exam and awarded a **$5000** scholarship
